Continuation of 11. does NOT place the application in condition for allowance because:

Claims 1 and 3 do not patentably define over Japanese patent 03-006362 ("JP-362") or Japanese patent 04-168273 ("JP-273").

Applicant argued that prior art is based on the use of ordinary stainless steels according to the JIS whereas present invention can be based on the use of ultrahigh purity stainless steels such as those developed by Daido Steel Co., Ltd. It is the Examiner's position that Applicant does not claim an "ultrahigh purity stainless steel" but rather an "ultra-low carbon stainless steel" containing carbon in an amount of 0.01% or less; and the stainless steel SUS 304 utilized by JP-273 and JP-362 contains 0.08% carbon or less which encompasses and includes 0.01% carbon or less. Hence claims would not patentably distinguish over prior art.

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 5 is indicated as allowable because it recites the step of dehydrogenating ultra-low carbon stainless prior to ion implantation which is not taught or suggested by the art of record. Inventive dehydrogenating step is critical to enable steel to be used at higher temperatures, as evident by disclosure of Applicant's specification starting from line 24 on page 7 to line 6 on page 8.
